

Hints on Pesticide Use

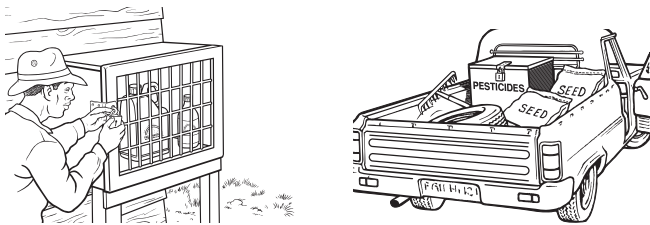

Before deciding to control, check for pests, diseases and natural enemies (scouting).

Pesticides can be dangerous - consider alternatives. If pesticides are needed, choose safer products, formulations and packaging.

Store and transport pesticides safely - lock them out of reach.

Read the pesticide label carefully - it has essential information on safe and effective use.

Wear protective clothing when spraying - cover the head, body and feet.

Wear EXTRA protective clothing when mixing and filling - gloves, apron, visor or other eye protection.

If pesticide is spilled on the skin or in the eyes, wash it off quickly with clean water.

Dispose of pesticide containers safely - triple rinse, puncture and bury away from water.
